

# Why Invest in a Retention Program?

Your teeth respond to all types of pressures from muscles within the face, your tongue, and stresses within your life. This can be from school, work, and family. The best way to protect your smile is your retainer. It is a template to keep your smile lasting forever.

Dr. Davis recommends that after an initial 6 weeks of full-time wear, retainers should be worn while you sleep for a couple years. After that, one can go to wearing them a couple times a week and then to a couple times a month, but never without them.

If you should happen to need dental work that changes the shape of your teeth and fit of your retainers, you will need a new retainer to fit to those changes. This will help protect any restorative work that you may receive.

Our retention programs allow for the replacement of lost, broken, or cracked clear removable retainers. It also covers discoloration as well as general wear and tear. Protect your investment and don't lose the smile you worked so hard to achieve!

Member

# RETENTION

P R O G R A M S

*Congratulations!*

You have finished your orthodontic treatment and have a beautiful new smile.

## Why Retainers?

Your teeth can move even after orthodontic treatment. As we age, our teeth continue to shift due to bone changes and muscle activity. There are many stressors such as school, work, and everyday life that play a part in this muscle activity.

Our **Retention Programs** are the perfect way to preserve your smile for the rest of your life. Dr. Davis states that “retention” is a life-long process. A commitment to your smile does not stop when you finish active treatment. Your retention protocol is just as important as your treatment.

### Retention+ DentalMonitoring

- Use DentalMonitoring to complete a monthly scan for one year with at-home retainer checks
- Includes 2 additional sets of clear retainers based on scan at removal
- Can enroll up to 6 weeks after removal
